

In re Patent Application of:  
**MOREAUX ET AL.**  
Serial No. 10/060,105  
Filing Date: January 29, 2002

---

**In the Specification:**

Please replace the paragraph beginning at page 9,  
line 15, with the following rewritten paragraph:

B1  

---

In practice, it is sufficient that the level Vlint  
should become smaller than the level of the pad PAD-B by one  
transistor threshold. Preferably, the transistors of the  
inverter 200 of the comparison circuit are chosen so that they  
have a threshold voltage that is as low as possible. The  
second inverter 201 ~~for its part,~~ is supplied ~~normally,~~  
normally by the two internal supply lines BV1 and BV2 ~~and-~~  
enable , and enables the reshaping of the output signal of the  
first inverter.
